

Complete dataset ($n = 897$, stratified by normative class)

Outer training fold (4/5)
ALL selection happens here

Inner 4-fold CV:
tree depth, leaf size, pruning,
leaf threshold (mean recall)

Refit the complete chain:
trees $\rightarrow$ rules $\rightarrow$ membership functions
 $\rightarrow$ consequent tuning

Outer test fold (1/5)
never seen during
any selection or fit

Out-of-fold predictions

Metrics over the union of the 5 outer test folds
(every record predicted exactly once, always by a model that never saw it)
